

Enterprise Application Integration

Enterprise Application Integration through Service Oriented Architecture

Founded in 1990, GalaxE.Solutions®, Inc. (GalaxE), is an industry leader in designing and deploying business processes and supporting systems that enable clients to transact and share information across internal networks and the Internet, targeting business results, competitiveness and efficiency.

Enterprise Application Integration, or EAI, is a major challenge for organizations that want to accomplish the goal of integrating disparate applications spread across the Enterprise to optimize critical workflow processes. The choices available to IT Management are:

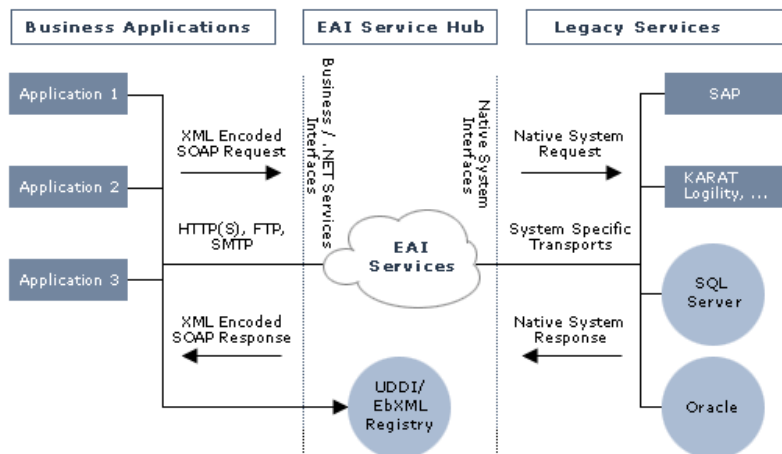

- Rebuilding Applications: This is not a practical option in most cases as associated costs are astronomical.
- Buying EAI Tools: The costs of integrating new applications and maintaining the EAI tools are significant, and increases over time.

GalaxE has expertise in achieving the goals of EAI using Service Oriented Architecture (SOA). We include existing IT assets in the SOA framework to minimize disruption to ensure that existing IT assets are reused. In addition, our SOA brings additional benefits like:

- Reduced Maintenance Cost: SOA is less expensive to maintain than alternative options.
- Reusability: New applications can use existing business services.
- Deployment Speed: With an ability to reuse existing business services, the new applications can be deployed and integrated rapidly.

To us, integration is not just about facilitating connectivity—it's about building an agile and flexible enterprise system that responds in real time to critical business requirements.

For more information about GalaxE's EAI and professional services expertise and how they can help your business today, please contact Tore Carlson at 732-868-0400 x221, or e-mail, tcarlson@galaxesolutions.com.
