

# Legacy Application Replatforming

**Leading Application Replatforming and Migration Specialist**

Founded in 1990, GalaxE.Solutions®, Inc. (GalaxE), is an industry leader in designing and deploying business processes and supporting systems that enable clients to transact and share information across internal networks and the Internet, targeting business results, competitiveness and efficiency.

Legacy Application Replatforming (LAR) allows companies to migrate their existing business-critical applications to newer, better supported and more easily integrated platforms. Many organizations have custom 3GL and 4GL applications that, while still possessing some value, are costly to maintain and enhance. These applications use obsolete programming languages that fail to integrate with Internet and industry-specific standards in use today. Often, these applications contain disparate and/or redundant data, and lack flexibility in handling business processes. Replatforming is aimed at the replacement of obsolete hardware/operating system infrastructures, as well as obsolete middleware, resulting in increased performance and lowered costs.

GalaxE is an experienced Legacy Application Replatforming implementer and can help organizations of any size rebuild or migrate their applications for a range of needs, including:

- Replatforming Data
- Replatforming Custom Applications
- Replatforming Packaged Applications
- Replatforming Business Intelligence Applications

For more information about GalaxE's Legacy Application Replatforming and professional services expertise and how they can help your business today, please contact Tore Carlson at 732-868-0400 x221, or e-mail, [tcarlson@galaxesolutions.com](mailto:tcarlson@galaxesolutions.com).
