

Master Data Management Services

Leading Integrator of the Siperian Integration Framework (SIF)

Founded in 1990, GalaxE.Solutions®, Inc. (GalaxE), is an industry leader in designing and deploying business processes and supporting systems that enable clients to transact and share information across internal networks and the Internet, targeting business results, competitiveness and efficiency.

Many organizations are looking to empower their business users to create and maintain master data with the appropriate security and release it to their business systems in minutes, all without adding the burdens of time and money to their IT divisions. GalaxE's Master Data Management (MDM) implementations empower business users with a best practice business management process to centralize and directly manage the structure of corporate data.

GalaxE helps companies design, deploy and configure the Siperian MDM Hub, and is a leading integrator of the Siperian Integration Framework (SIF):

- Production use of SIF as a services-based framework
- Establishment of interfaces and modular workflows
- Exposing SIF through SOA to all tiers of architecture, such as presentation services involving AJAX
- Security tiers
- Integrates with multiple systems, such as SAP, PeopleSoft, Lotus Notes, WebSphere and WSMQ, Nakisa, Taleo and webMethods

For more information about GalaxE's MDM and professional services expertise and how they can help your business today, please contact Tore Carlson at 732-868-0400 x221, or e-mail, tcarlson@galaxesolutions.com.

Benefits of GalaxE's Implementation of the SIF MDM Open Integration Model

-  **Proven track record of successful implementations and demonstrated ROI**
-  **Lowers Total Cost of Ownership (TCO) through open interfaces**
-  **Eliminates layers of abstraction that result in loose coupling**
-  **Ensures efficient platform upgrade path**
-  **Maintains isolation of roles, responsibilities and access mechanisms**
-  **GalaxE-designed simple, ergonomic and effective front end that abstracts Siperian functions for use by non-Siperian experts, which works in conjunction with an open and flexible reusable back end interface**
