**Job Title** [Lombardi Architect](#)

**Location** United States – Detroit, MI – Somerset, NJ – Pittsburgh, PA

**Position Type** Full-time

**Job Description** The Lombardi Architect will help the organization migrate its business processes and associated application infrastructure to the Lombardi Teamworks business process management (BPM) platform. He/she will be required to rapidly understand and evaluate complex pre-existing systems, requirements, and processes. He/she will be required to design and implement large, complex Java-based solutions that will involve extensive integration between Lombardi Teamworks and other external application and security frameworks. He/she will be responsible for developing system specifications, unit tests, and high-quality Java-based application artifacts under the general direction of Pershing technical architects and team managers.

**Qualifications**

1. Strong knowledge of the Lombardi Teamworks 6.2.x & 7 platforms. Experience implementing complex Java-based solutions that involve extensive external system and security integration with the Lombardi Teamworks platform. Knowledge of both Java enterprise and Lombardi Teamworks design patterns and best practices.
2. Extensive experience with Java enterprise application servers. WebLogic Integration Server 7, WebLogic Application Server 9.2.x, and JBoss application server experience is strongly preferred. Enterprise JavaBeans (EJB) 2.x & 3.x, Java Message Service (JMS).
3. Spring 2.x & 3.x, Hibernate 3.0+, Apache Struts 1.x+
4. Java JDK 1.4.2 & 1.5, JDBC, Collections, JavaBeans, concurrency, multi-threading, etc.

5. REST, SOAP, web services design and security best practices.
6. HTTP, cookies, digital signatures, SAML, Java Authentication and Authorization Service (JAAS)
7. JSON, XML, XSLT, JavaScript
8. Database \* Experience with complex SQL queries, stored procedures, performance tuning & database modeling. MS SQL Server 2008 is preferred, Oracle 10g would be a plus.
9. Full software development life-cycle experience. Extensive experience with unit testing methodologies and frameworks.

**Responsibilities**

1. Collaborates closely with technical architects, development managers, project managers, and other PMAS subject matter experts to understand requirements, define, and implement solutions related to the organization\*s migration to the Lombardi Teamworks platform.
2. Performs at an extremely high level of technical competence and maturity. Contributes expert-level Java development and design expertise to the project effort.
3. Analyzes existing processes, applications, and components. Researches, evaluates, and recommends ideas for improvements.
4. May provide direction and guidance to other workflow developers.
